

# AXL300 Axle Load Gauge

 AXL300 Single Sensor - Location

“Don’t underestimate your weight we can help you increase productivity.”

The AXL Axle Load Gauge is designed for truck or trailers fitted with airbag suspension and provides a reliable and accurate solution to displaying the load on each axle group. The AXL300 is our most cost effective weight gauge.

- Minimise your risk of overloading
- Reliable and accurate technology
- Improve your productivity

- The AXL Axle Load Gauge offers a rugged, reliable and accurate solution to display the load on each axle group
- Easy to install and use
- Large bright LED display for day and night time operation
- The AXL300 is sealed against water and dust
- Multi Voltage, It can operate from 7 to 30 volt DC

After installation to a Truck or Trailer with air bag suspension, the AXL is calibrated when a known load is applied and weighed correctly on a certified weigh bridge. Once the unit is calibrated the gauge will indicate the axle load weight via the large LED display.

The Standard AXL truck scale range has been designed for easy installation, The gauge can be installed by competent operators and is typically connected to the vehicles light circuit. Alternatively we are happy to assist with the installation.
